## Overview

Burning Horse is a decentralized web3 application (dApp) built on Binance Smart Chain.

BRHS is a utility token required to interact with services and smart contracts provided by Burning Horse.

At the initial stage, the general functionality of the application is to provide services such as Staking, Reward Distribution System (Burning Horse Lottery) and NFT Store.

Staking and Burning Horse Lottery tasks are performed by smart contracts.

BRHS has a maximum supply of 500,000,000 tokens.

The maximum supply number is subject to change, but in any case, cannot exceed 500,000,000 tokens.

Mint of tokens over the number set as the maximum supply is not possible.

# Staking

Staking is a tool for distributing initially unreleased tokens among the community.

Staking contracts have limits (quotas) on the number of tokens that can be staked at the same time. You can view the current individual limits on the "Stake" page by clicking on the hint "How much can I stake". This restriction is necessary to prevent unlimited enrichment of "whales".

In addition, there are general limits for each staking smart contract. Up-to-date information about them is also located on the "Steak" page. General restrictions are in place due to the fact that BRHS has a limited maximum supply.

## Basic Staking

Smart Contract: [0x3136E5D572f8B25807109a86b6A7a32CE3754567](#)

The Basic Staking has 6 staking plans.

Each plan has different annual income percentages. Depending on the increase in the interest rate, the blocking period also increases.

The blocking period is an initially known period of time during which the user will not be able to withdraw tokens from the stake. The duration of these periods is set in the smart contract and cannot be changed.

The blocking period is set for 5 staking plans of the main smart contract - a plan with a minimum APY does not have such a period and is available for withdrawal at any time.

## Premium Staking

Smart Contract: [0xcb367A5364434768D77f1303Eb1A51755ad05088](#)

Premium Staking has 3 staking plans.

To get access to Premium staking plans - the user needs to participate in the token burning program.

Depending on the increase in the interest rate, the number of tokens that need to be burned also increases.

The advantage of Premium Staking is that there is no blocking period on all staking plans.

In both smart contracts, profit is accrued every 24 hours from the start of staking.

# Burning Horse Lottery

Smart Contract: [0xb6633F4CF79d82dd8629fA1eAdBe7F3D8cDD0eCe](#)

The Burning Horse Lottery is a Rewards Distribution System with an unlimited number of participants and lottery tickets.

At the initial stage, the draw will be held after different time ranges from the beginning of the lottery round. In the future, when a stable lottery audience is recruited, it is planned to transfer the lottery draw to a fixed period of time.

During the draw, the smart contract will generate 3 random numbers. The winners of the round will be the holders of lottery tickets with corresponding numbers.

It is possible for the same number to appear multiple times.

The amount of winnings is set at the beginning of each round.

## Discount

There are several ways to get a ticket discount:

- **Bulk discount** - the more tickets purchased at a time, the greater the discount. The maximum amount of this discount is **5%**.
- **NFT Golden Ticket** - a discount that the user receives after purchasing the NFT Golden Ticket in the NFT Store. The discount is valid as long as this NFT remains on the user's wallet. The amount of this discount is **10%**.

Discounts are cumulative.

## NFT Store

NFT Store - a platform where the user can purchase our NFTs or receive them during the distribution.

Some NFTs purchased from the NFT Store can be set as the avatar used on the Burning Horse website. The avatar can be changed on the Profile page.

In the future, the possibility of expanding the NFT Store to host third-party NFT tokens is being considered.

# Economy

## About Token

Smart Contract: [0x68FD3bDaf70bd14828bab06d5BF854349d1F4aE6](#)

Burning Horse Token (BRHS) has a total supply of 300,000,000 tokens. BRHS does not have a fixed maximum supply.

Token name	Burning Horse
Ticker	BRHS
Type	BEP-20
Total supply	300,000,000
Max supply	500,000,000

## Burning Strategy

The destruction of part of the emission is carried out in order to limit supply and fight inflation.

Since we believe that burning some of the user's personal tokens is not fair, we abandoned the idea of self-burning the token with each sent transaction. Instead, we plan to host quarterly token burns. The final conditions for the implementation will depend on several factors that will be formed during the first quarters of the life of the project.

Each user can also become part of the token burning ecosystem. To stimulate participation in the token burning program, rewards are provided for the user. At the moment, this is Premium staking. Additional awards are expected in the future.

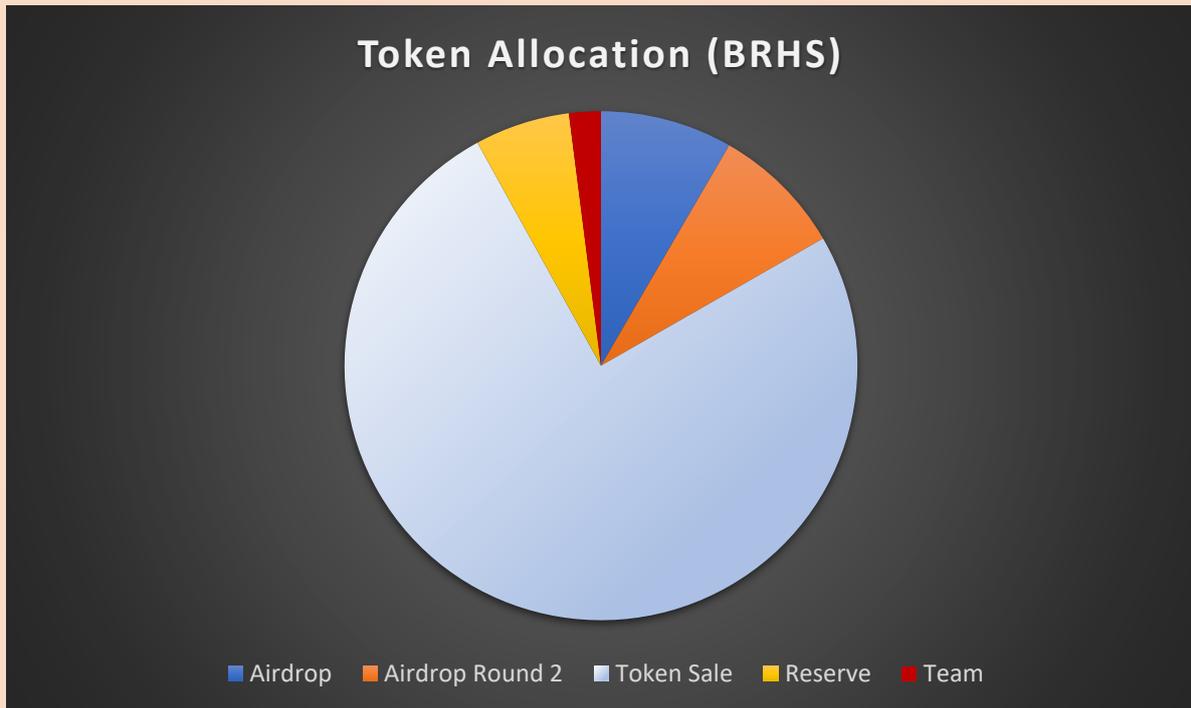

The Burning Horse Lottery also participates in token burning. All tokens collected during the round will be burned, with the exception of tokens for the payment of the reward, as well as the organizer's fee.

Depending on the number of tokens sold, 90-95% of the tokens that were not sold during the pre-sale and the token sale will be burned. The rest will be reserved to provide liquidity.

### **Liquidity**

Liquidity will be added after the end of the airdrop and token sale. To provide guarantees for BRHS token holders, liquidity tokens will be frozen for a period of at least one year. Therefore, the liquidity added by us cannot be removed during this period. You will find out about the freezing of liquidity tokens on our social networks.

## Token Allocation

Airdrop R1	~8%	25M
Airdrop R2	~8%	25M
Token Sale	~75%	226M
Reserve	6%	18M
Team	2%	6M

25,000,000 BRHS tokens are pledged for each Airdrop round.

226,000,000 BRHS tokens pledged for the Presale and Token Sale

Reserve tokens can be used to conduct unscheduled events, and can also be used to add liquidity.

The project team will receive only 2% of the tokens.

# Token Sale

Why should you buy Burning Horse Token?

Burning Horse Token gives you access to the use of ready-made products: staking, participating in the lottery and buying NFT.

Moreover, the purchase of tokens will contribute to the further development of the project, which is important from an economic point of view.

The purchase function is built into the smart contract of the BRHS token, respectively, the honesty of the transaction is guaranteed by the blockchain and the smart contract, which you can read at the previously given address.

The funds collected during the sale of tokens will be used for the further development of the project, liquidity, covering the costs incurred during the initial development of the project and smart contracts, as well as promotion.

The sale of tokens will be carried out in 2 stages: Pre-sale and Token Sale. Depending on the stage, the cost of the token will change.

Stage	Tokens/BNB	Num of block
Pre-sale	100,000	22,222,888
Token sale	62,500	23,524,618

The sale of tokens has a referral program - 10% to the referrer when buying tokens through his link.

Pre-sale	
Start date	October 19, 2022
End date	November 30, 2022
End block	23,524,618
Tokens	Up to 226M
Token price	0,00001 BNB

Token sale	
Start date	November 30, 2022
End date	January 31, 2022
End block	25,310,217
Tokens	Up to 226M
Token price	0,000016 BNB

**Hard Cap: 2260 BNB**

## Airdrop

Airdrop	
Start date	October 19, 2022
End date	December 31, 2022
Tokens	25,000,000 BRHS
Reward	2,000 BRHS
Referral reward	50 BRHS
Max participants	12,200

The reward will be distributed among the participants of the airdrop program if all the necessary requirements are correctly met. The distribution of airdrop tokens may take several months from the end of the airdrop round.

Airdrop has a referral program - 50 BRHS to the referrer for each referral who correctly fulfilled the conditions of the airdrop.

A few months after the completion of the token sale, it is planned to launch the second round of the airdrop.

Also, during the 1st round of the company's airdrop, the user can claim 1 free NFT, which he can receive in the NFT Store by independently interacting with a smart contract using the Burning Horse application interface.
